

Our Promise

Nobody can guarantee the best results every time when it comes to treating people. One thing we can guarantee and will deliver, -the best effort. The best effort from top professionals who spend their years not in bench research or teaching, but in perfecting their skills, the art of medicine. The art dedicated to adding quality years to your life.

**At Last.
Comprehensive Cardiovascular Care.
Tailored to YOU.**

**Atherosclerosis Regression Clinic
Minor Stroke and TIA Clinic
Hypertension Clinic
Renal Remission Clinic**

**Renal Remission and Hypertension
Consultants, PLLC**

Do we need better Cardiovascular and Kidney Disease Management?

Do you know that current cholesterol management guidelines **fail to identify 75% of first heart attacks in people under 55?**

Do you know that most of the patients who have coronary heart disease, stroke, diabetes or poor kidney function will more likely than not die from another heart attack or stroke or end up on dialysis **while receiving “standard of care” therapy?** Is there something better, something beyond “standard of care”? It is already proven and published in the medical literature that 90% of recurrent heart attacks, 80% of recurrent strokes, 40% of death in diabetics, 70% of dialysis in patients with kidney diseases **can be prevented** using Multimodality Interventions.

Our Difference

Our approach is based on the above mentioned multimodality protocols proven to achieve superior results in clinical trials. **We optimize these treatment regimens to each individual patient** and use specific measurement to prove that the treatment is working for each individual.

Yes. We can achieve and prove a regression (improvement) in atherosclerosis of major arteries. It literally means they are getting younger. This is our **Atherosclerosis Regression Clinic.**

Yes. We are likely to succeed in controlling hypertension and preventing further strokes, heart attacks and kidney failure where others fail. This is our **Hypertension clinic.**

Yes. We can stop progression of kidney failure and even achieve improvement in some patients. This is our **Renal Remission Clinic.**

And yes, patients who are able to achieve all or most of our goals will have almost non-existing risk of stroke, heart attack, or death from cardiovascular causes in their lifetime.
